SIDE SUPPORT SYSTEM

Fabricated from iron sheet (reference standards: UNEEN-10025, EN-10029, UNE 36,080, IN 10051, IN 10,131 AND 10,143 as recorded by TDC: A267/99) hot rolled 4.76 mm thick in the case of small support (which holds the small motor) and 6.35 mm when it comes to the Big support (large motor) subject to a process of laser cutting, forming, welding and coated with white zinc. The difference in two sizes is based on the study to bear the burdens resulting from the size of the roll-up doors, weight and conditions associated with each type of work, and the actual characteristics (design, size and engine weight) to be allocated to raise the shutters.
